Colombia, working remotely

Ten years in the Laravel ecosystem. I modernize legacy apps without changing how they behave: Livewire decomposition, Inertia and Vue migrations, test-forward refactoring. I work with an agentic AI workflow and run products of my own.

01 Foundation

Senior Laravel engineer

Senior Software Engineer, Level60 Consulting

Sep 2024 – Present

Nashville, TN · Remote · multi-app Laravel on Livewire, moving to Inertia

- Decomposed oversized Livewire components into prop-driven boundaries, the shape a Vue component takes, so each refactor moves the app toward Inertia.
- Merged a React SPA and its API into one Inertia monolith, with **Spatie laravel-data** keeping PHP and TypeScript types in sync.
- Upgraded production from **Laravel 8 to 12** with Rector, covering behavior with Pest and Playwright before each stage.
- Cut a real-time dashboard's heaviest SQL Server queries from **5 s to 900 ms** with targeted queries, Redis and Octane.

Senior Software Engineer (contract), EyeUniversal LLC

Feb 2022 – Apr 2024

San José, CA · Remote

- Lead developer on **Run Layout Tool**, a drainage configurator built from scratch on Laravel, Inertia and Vue 3. Still in production.
- Owned delivery end to end for US clients, with requirements straight from the product manager and no tech lead above me.

Lead Developer, Ovy.so

Jul 2017 – May 2022

Colombia

- Led the team from a native PHP monolith to Laravel, then **Inertia v1 to v2** and **Vue 2 to 3**, on Docker.
- Shipped an offline PWA covered in Laravel Dusk, a Google Workspace integration over OAuth2, and continuous delivery with GitLab Flow.

Software Development Instructor, SENA

2021 – 2025

Colombia

- Taught the programme I graduated from, PHP and Laravel through CI/CD, and mentored juniors into their first codebases.

Education

SENA, 2009 – 2011

Associate's degree, Software Analysis and Development (ADSO)

Still learning

Laracasts and 39 Platzi certifications

- **Measure first.** EXPLAIN, indexes, targeted queries and caching before any rewrite.
- **Test-forward refactoring.** Cover existing behavior, then refactor in stages that each ship green.
- **Agentic workflow.** Claude Code with custom agents for review, security and tests. Architecture, auth and money logic stay human-reviewed.

Skills

Backend	PHP 8.3, Laravel 8–12, Livewire, Filament, Octane, Horizon, Redis, queues
Frontend	Inertia, Vue 3, React, Next.js, TypeScript, Tailwind
Testing	PHPUnit, Pest, Vitest, Playwright, Laravel Dusk
Data and delivery	MySQL, SQL Server, PostgreSQL, Docker, CI/CD, Rector

Selected work and open source

QuickBooks and Hotmart billing	Idempotent queued jobs on Redis and Horizon, so no purchase is invoiced twice.
laravel-missing-index	Runs EXPLAIN on every dev query and prints the missing CREATE INDEX.
mkdn	Turns PDF, DOCX and Excel into Markdown for LLMs via Workers AI.
Google Workspace package	Meet, Classroom and Calendar for Laravel, in production.

Ultti 2 businesses live	A delivery business's catalog in one link; orders land on WhatsApp ready to dispatch. Multi-tenant on Supabase.
Instructor Virtual 1,200+ graded	Chrome extension that grades SENA coursework against rubrics with AI.
Malta Pharmacy Empire Live	Programmatic SEO directory, 800+ static pages, no runtime database.
Corre Conmigo Beta	Family voice messages in a runner's headphones, plus cues every kilometer.
FunAudios Beta	Funny clips sent to WhatsApp as voice notes.

Remote contracts, legacy Laravel rescues and performance audits with teams that care about quality.

| "I build the boring parts well so the interesting parts get a chance."
